At a recent Ophthalmic Congress. Dr. Denis Lam observed that one definition of vision is "the ability to see invisible". He was referring to those scientists / clinicians who are able to see opportunity where others see only difficulties – to paraphrase Einstein

The next few issues shall be following at short intervals. We wish to have a super speciality section in each journal and so convey each topic in detail.

This issue of the journal is the first time we attempted to start the Consultation Section. Here a photograph of the case & its history is described and its detail management till today would also be there. The case would also be studied by other consultants and their opinion would also be mentioned.

We as surgeons & our patients together shall dream for the next decade of all the different ways of achieving the best Pseudophakic accommodation. We still wish to have a perfect accommodating intra ocular lens. (AIOL)

Success here will definitely open a huge avenue of endeavor; this goal is the greatest challenge for refractive surgery in the next decade.

Wish You and Your Family A Very Happy, Healthy and Prosperous New Year

Warmest Regards,

**Dr. Kumar Doctor**
